Summary

Clip for holding glass or mirror in place in cabinet

[Household](#) > [Other House Equipment](#)

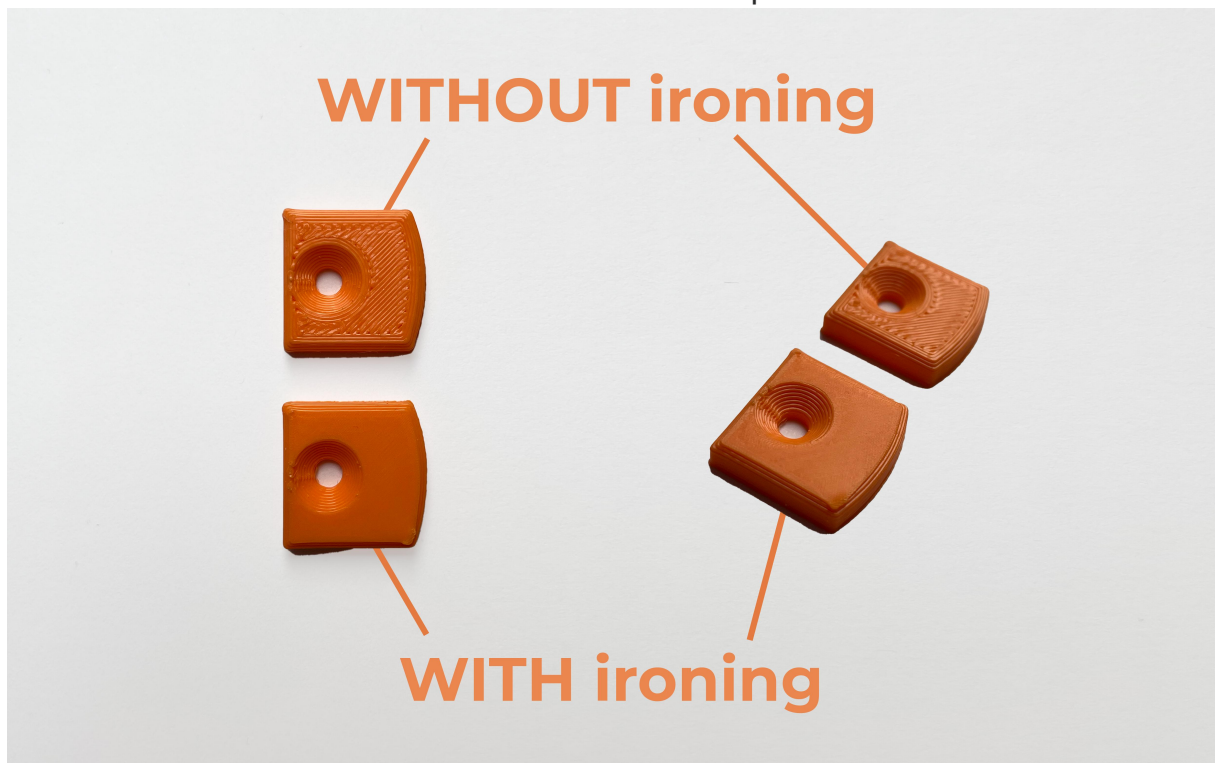

Tags: [clip](#) [glass](#) [mirrorholder](#) [mirror](#) [glassholder](#)

This is a very simple model for a clip that holds glass or mirrors in place in cabinets or wardrobes. With a recess hole for the screw.

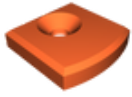

I have uploaded a single model, so you can print either one that you lost or as many as you want.

Obviously, no supports are needed; just lay flat with 10-15% infill.
 Best printed in PETG for strength, but PLA tested and works just fine.
 For extra points, I recommend turning on **ironing** for a smoother top layer and much better and smoother looks of the clip:
