I wanted a simple way to mount a camera to a shelf, desk, etc. Since I already had some Ram Mount parts to mount the camera, I decided to to use these parts.

Previously I printed akmalznal Headphone Holder, I used the clamp part and added two Ram Mount balls.

You'll need bolt and protector from the original design. Depending on the thickness of your shelf you might also need a longer screw which you can find in the remixes.

This remix is based on

Headphone Holder

by akmalznal
