updated 3. 7. 2024 | published 3. 7. 2024

Summary

This model is for the mounting of a flic hub mini to a magnetic surface (like a fridge or filling cabinet)

[Hobby & Makers](#) > [Electronics](#)

This model is for the sole purpose of mounting your flic hub securely to a fridge or similar metallic flat surface.

This hub holder was made using rhino and requires the use of two 5mm high x 8mm diameter magnets. i welcome modifications to the file and if the original is desired please let me know :D

The model is printed with the flat part down and requires no supports.

the hub has a friction fit and will not go anywhere on its own when in the mount/bracket thanks to the rubberised bottom of the hub and will be further secured when the magnets are in place.

please let me know if a model with counter sunk holes in place of the magnet holes would be desireable and i can update the model.
