Summary

Support different radios going into the radom.

[Hobby & Makers](#) > [Electronics](#)

Tags: [meshtastic](#) [wisblock](#)

I like TechnoVardo's radom design, but he (reasonably) doesn't have a baseplate for every possible radio. I have a blank baseplate and a baseplate for the WisBlock 17007 (WisBlock Base Board), which includes antenna mounts for BLE and LoRa.

Note that the photo is upside-down to show you the indexing slots.

This remix is based on

**100mm Radome for Meshtastic/TBeam/RAK WisBock/
SDR/Raspberry Pi with Painter's Pole Mount**
