First

Ksuszka did a great job with his Bosch 12V flashlight. (Thank you)

I needed an adapter to use the Bosch GBA battery with my ts100 soldering iron

I changed the flashlight to use only the part I needed.

I only needed the piece with the male connectors

I inserted a DC jack connector

I did a little circuit to connect the male connectors and the plug, but you can do it with wires

After I found the work of 4numen with its case for ts-100

So I adapted my first work to integrate it with 4numen modules

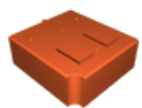

The adapter is held at the bottom of the module with 3 small screws 3x10
