Fillowing on from my original File Handle and the Hex Key long axis mount, here is a remix between the two, i.e. a similar profile to the bulb shape at the back of the hex key handle (<https://www.thingiverse.com/thing:3605461>), applied for use this time with a chisel (or file).

The hole for the tang of the chisel or file is the same as the previous file handle (<https://www.thingiverse.com/thing:3490434>), so any adjustments to the width or depth of this hole by drilling etc. can be made similarly as before.

There is a slight change to the profile of the ferrule (a little neater) and the inserts are very slightly smaller to enable an easier fit.

Enjoy!

Print Settings

Printer Brand:

Prusa

Printer:

i3 MK3

Rafts:

Doesn't Matter

Supports:

Doesn't Matter

Resolution:

0.2mm Quality

Infill:

20-30% for strength as a tool handle

Filament:

Generic PLA Colour to suit.

Notes:

Brim used by default to save on filament (and the environment!)

Much the same method and process as previously with the first file handle (Thing:3490434) - check this out for further info. Category: Hand Tools
