### Summary

An organizer for different types of shower things: it includes 4 hooks and a razor holder and the top part is a shelf.

I needed a way to organize all the things present in my shower so I designed this shelf!

The hooks can be used to hold sponges and brushes, while the top ones are specifically designed to hold razors in place. The top shelf is perforated to drain water and can easily hold body wash, shampoo bottles or hair masks containers.

The shelf is designed to be glued to the wall in a shower corner (with adhesive tape or hot glue, just make sure it is water resistant) but can be easily modified to add screw holes (f3d file is available).

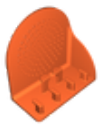

I printed the shelf with the orientation in the stl/3mf file and used normal supports only for the hooks and razor holder, but they may not be needed.
