## Summary

minimalist approach to umbilical setup (for Voron 2.4, but universal)

this was made for the PTFE that came in an LDO Voron 2.4 kit (large diameter), the Bowden hole is 4.5 and it shouldn't be a tight fit (and it's certainly not tight with the Creality tube I have now) / the middle hole is for a peice of filament for extra support, and that might be pointless / a zip tie slot to attach the canbus cradle.

So binds together the Bowden tube, two peices of filament (one in the Bowden tube) and finally the canbus cable to achieve minimal umbilical
