Summary

End caps which function as damping feet. Can be used universally for all ITEM 2020 profiles.

Tags: [damper](#) [item](#)

I wanted the stand to be stable and not slippery, and I also didn't want the profiles to get scratched.

That's why I made these end caps for the damping.
They are needed four times and I used some self-adhesive ~ 8 mm diameter ones ([for example](#)).
