I got really annoyed I had to open or remember where I put open Prusament boxes in my IKEA Malm dresser. As prusament spools fits almost perfectly in the dresser it's perfect for storing them till next usage.

I found a way to organize it, by printing these signs you can either write on them, print them with text (if you have multiple color option) put labels on them, or simply print them in the color equivalent to the filament stored at the spot.

I hope you can use it.

Let me know if I need to change anything, fits perfectly on my Malm, printed in PLA for tests
