Version 2 of my A1 Top Bar Light Mount. In this revision the mounting arm for the light was lowered to accommodate spacing when using the top mount spool holder, the hole for the zip tie was slightly enlarged to accommodate some thicker zip ties I had. This is a mount designed to attach to the top bar of a Bambulab A1. It was made specifically to hold a Feit Electric 10in light bar (<https://www.homedepot.com/p/Feit-Electric-10-in-Fits-12-in-Cabinet-Plug-in-White-Dimmable-Linkable-Integrated-LED-Bright-White-Under-Cabinet-Light-3-Pack-BPLVUCL10-3-830/318112878>) but it could be adapted for other uses. Contains a screw hole sized for an M3 screw as well as a slot for a zip tie to properly secure it snug.

Note: Be sure to space them in far enough to clear the brackets for the gantry.

Original model can be found here:
