Listen, entering a mysterious bathroom is like playing a game of bathroom roulette. You never know what you'll encounter. It's like stepping into a surprise party, but instead of confetti, you might find unexpected plumbing catastrophes. Knowing your bathroom's quality beforehand is crucial. Imagine sitting down, about to embark on your private adventure, only to discover the toilet has the flushing power of a lethargic snail or, worse, a broken lock leading to an impromptu meet-and-greet session mid-business. It's like choosing between a luxurious spa day or an episode of a survival reality show. Trust me, folks, assessing the bathroom's quality is the difference between a comfortable mission and an impromptu escapade in plumbing acrobatics!

Print recommendation

2 walls, 10% infill, .16 layer height, ironing on top surfaces, no supports needed, PLA/PETG recommended.

Print 5 filled in stars, 5 nonfilled in stars, 1 frame and 1 shelf.

Setup for multicolor printing. Orientate the text/stars upward and use the last layer or two to change text/star color

Assempley

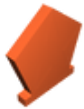

Just a dab of superglue to hold the stars together. (filled in star is glued to the back of a non-filled in star)

2 Standard dry wall screws are needed to mount to a wall. No drywall anchors needed as this is really light. Shelf just rests on the frame. No need to glue or tape down.
