Summary

Needed a clean way to keep a 500g desiccant near the filament in the enclosure between prints. Designed for basic ender3

[wisedry](#)

I use a 500g Wisedry “rechargeable” desiccant packet in my 3d printer enclosure to keep things dry between prints (does anyone actually remove their filament between prints?).

The basket was designed to fit the filament spool arms that come on basic ender3 models. I'm sure there are a long list of other FDM printers that use the same style spool holder, but I cant' speak to individual models that I don't own.

Outer dimensions: x=144, y=44, z=164
Walls are 3mm thick.

Rear hanger slides over a ~43.5mmx10mm metal spool bracket, with a 45mm hole in the back to avoid bumping into the spool bearing / screw.

Happy printing, stay dry!
