08-04-2024 Hello, I present the first Add-Onn for TUBE, inserts for small objects! File names start With AO (AddOn) (needs support)

TUBE

Here I present yet another storage contraption named TUBE. In this one, I challenged myself to create a mechanism without the use of any hardware. On my latest projects, I've received feedback about the complexity, and this is my response to that. Please read the additional notes below before you embark on printing the TUBE.

Consider following me on Instagram (@**SMACKMAX_**). I try to post all of my prints, renders, and animations to build a portfolio of my projects,

often in advance of publishing the models. This way, you can get a sneak peek of what's coming next! https://www.instagram.com/smackmax_/

Requirements:

- Superglue (or any other glue)
- Filament of your likeing

Notes:

- Print orientation: see picture with suggested orientation
- The clam should be glued to caps
- Cap consists out of 2 parts (not symmetric due to the threads)
- Operation is sliding and screwing with the palm of the hand
- Printer used: Creality Ender-6
- Designed with Fusion360
- Printed in: PLA, Fiberlogy Easy grey, Graphite, and Copper
- 3 Walls, 8% Infill, 0,2 layer height, "standard" printer profile with wall speed upped to 60 support at $>54^\circ$ (standard zigzag support, no hassle)

If you enjoy my style and would like to support the creative process, I invite you to declare 'war on boring and mundane designs' together by joining my **Printables club(with exclusive models)** and supporting the R&D of future projects! There's even an option to become a commercial R&D partner! Don't fancy a subscription based contribution? You can check out one of my paid models or use the paypal link below :) https://www.paypal.com/donate/?hosted_button_id=XTLND2YQYQFFU

Decorative object; Printed in PLA on Ender 6 / Bambu A1 Consider leaving a review, often I revisit models for updates and upgrades. Many of my projects are personal projects and can be complex to print and assemble so keep that in mind
