## Summary

Mount your laptop under your desk for a tidy, quiet, and convenient workspace.

It's a simple holder that lets you attach your laptop under your desk, where it's safe and snug. It works with most laptops and desks, and it's super easy to set up and use. When you put your laptop under your desk, you get a lot of benefits. You have more room on your desk, you don't have to deal with messy cables, you don't hear your laptop fan as much, and you can sit better and feel more comfortable. And if you need to use your laptop, you can just slide it out and turn it around, because it has a smooth and flexible mechanism.

I've printed on Bambu X1C, using white Matte PLA on strong settings - 0.2mm, 6 wall loops, 25% infill and it is super stiff in all directions.

Mounting hole is made for countersink wood screws - I've used 3.5X16mm, holds perfectly.

Mounting hole dimensions:

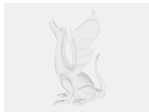

I've included two versions, one with hole to put cables through and second full, which is much stronger.

My current setup is holding Lenovo P1 Gen3, which is sitting on Coolermaster cooling pad with two 120mm noctua fans.
