Yeah so basically i wanted to make a bowl kinda simple. But i messed up my solidworks fonction and ended up with something really aesthetic so i thought it was a good idea to share it.

the photo shows a version printed in blue PETG on a elegoo neptune 3 pro. the angle at the start is a little bit too high so you may need a support for things like PETG to have a perfect print but in most of the time you can print it without any support and with any material.

for the infill u can do as you want depends if you want to make it hard or not (this should be fun with TPU i believe)
