### Summary

A simple but catching lure. This easy to print and assemble lure has a very nice and unique swimming and jerking action.

This lure is my go at a 3d printed jerkbait which sadly are very rare to find on printables or thingiverse. I designed this off of the Westin Swim and gave it the same details. I would be very happy about some makes or even fish you caught on it.

### Print Settings

#### Printer Brand:

Elegoo

#### Printer:

Neptune 3

#### Rafts:

No

**Supports:**

No

**Resolution:**

.16

**Infill:**

50% (doesnt really matter, adjust the sinking behavoiur with lead)

**Assembly**

It is meant to be assembled with steel wire, but if you prefer you can just use screw eyes. Contrary to common beliefs, it is actually very durable.

I used a 12.5 gram spinner weight in the front and a 9.5 gram weight in the back, but you can use basically anything. I used splitshots to balance it almost perfectly. Keep in mind that the hooks also weigh extra.

I painted this lure in a very simple “Hot-Pike” pattern and used 10mm eyes.

**Update**

Caught this thick 85cm Pike on the Hot Pike pattern.
