Summary

I picked up a few Ekenabben shelves and needed some attachments that worked with it.

A misc. set of files that work with the Ikea **Ekenabben product line**. If you push the shelves together you're going to want a way to easily keep them together - see the Leg_Clamp_V1. It has a small round-over edge and a slight notch on the backside to 'catch' in place. I grabbed these shelves to put some of my office plants/vines and I wanted to manage the runners/vines so there are a few misc. plant "hooks" that attach to the forward shelf. The Lrg_Plant_Vine_Hook is the one to print, the other Sml one is more for really small vines and/or could be used for other items to hang/hook. The overall measurements are slightly smaller than the thickness of the shelf to give it a simple 'clamp' mechanism. Feel free to rework them

to be even tighter and/or generate a larger gap or give yourself additional friction via some tape on the interior to thicken it just slightly.
