I wanted to place @agepbiz controller stand on top of my Edifier R1700BTs speakers, but their top surface is slanted, so I designed this model which makes it horizontal, and has the Xbox stand's female bottom shape so it doesn't move.

Printed with 0.2mm and 30% infill.

If you use Cura with Mesh Tools and there's parts in red, go Mesh Tools → Fix model normals. I haven't tried printing it without doing this step.
