### Summary

Remix to add a slot so you can see the board LEDs + opened up the lid around the USB connectors - original too tight.

[Gadgets](#) > [Computers](#)

Minor remix to add a slot so you can see the board LEDs. Also, opened up the lid around the USB connectors since the original was too tight for my Raspberry Pi 3.

V3 - added a hole to the card slot to make it easier to get the SD card out with tweezers
