Summary

Basket for toilet tabs for flushing tanks. To prevent the toilet tabs from blocking the mechanism of the flushing tank.

[Household](#) > [Bathroom](#)

Tags: [toilet](#) [tank](#) [flushing](#)

The Basket holds the toilet tabs in position within the flushing tank, to prevent them from blocking the mechanism of the flushing tank.

The basket consists of 3 parts:

- 2 box halves
- 1 clamp
- 1 hook

Only the clamp needs support.

The parts have to be printed out of a material, which could permanently cope with water and acid. PETG should be ok.

The clamp and the hook have to be connected by something like a fishing line, which have to be long enough, that the whole basket is under water.
