Summary

A simple model for lowering the pickup selector switches on a Fender Mustang so they don't scrape your knuckles.

Tags: [guitar](#) [fender](#) [pickup](#) [mustang](#)

I've included single and double switch models at 3.5mm and 4.5mm deep. The double configuration was sized for a 1994/95 MIJ MG65 Mustang. Not sure if the spacing will be correct for other models.
