This is a remix of [Evade.Ninja](#)'s Game Controller Tower, which was remixed from [TheSkullMeister](#)'s Stackable Gaming Controller Stand, but the parts in this remix are made to work specifically with Evade.Ninja's.

These are meant to be additional arm types for the Game Controller Tower, and should be used with the base and cap files provided there. The new arms include:

- A Keyboard arm, which extends towards the rear of the tower, allowing you to rest a smaller wireless keyboard (designed with the Logitech K400+ in mind) against the tower, and helping keep your living room gaming peripherals all in one place.
- A modified Normal arm, which has a hole in the tower to allow you to charge the controller on display.
- A modified Normal arm with cap, also utilizing the cable hole, but also meant to be the top of the tower, so instead of have the full 130mm

height, this one loses the peg for additional stacking, and stops at 69.5mm, saving on filament.

- A MiniCon arm, this arm is intended for use with smaller formfactor controllers, like the [STOGA Animal Crossing](#) inspired controllers. The original design was too wide for the controller to sit properly, so this takes care of that. This controller also has the cable hole in the rear.
- A MiniCon arm with cap, also with cable hole, and meant to be the top of the tower, shrinking the overall size from 120mm, to 69.5mm.

Outside of that, they should work perfectly with the base, caps, and other arms from the Game Controller Tower, and just peg into each other to make a pretty sturdy tower even without glue, but it might be a good idea to glue it together once you're happy with the layout.
