### Summary

Print this in flexible (TPU) to hold your bubba rope or winch line in place on the recovery hooks of your Jeep.

The recovery hooks on Jeeps are great but it always seems like whatever I hook onto them has weaseled it's way off in the time it takes me to walk 50 ft away to operate the winch or whatever. Here are two models for the front and rear recovery points on a 2018+ Jeep. Print in flexible filament (ideally TPU). Both front and rear keepers are included here although I've only printed the rear one so far. Measurements for the dogbone holes are:

Rear: 24x26mm and 26x24mm

Front: 20x28mm and 13x20mm

Hook measurements were taken directly off my jeep so it doesn't work, try reversing the dogbone or using a heatgun/hair dryer to slowly improve the fit.
