I designed this stand for my Anbernic RG405V but I do believe this would work universally for any Gameboy styled handheld retro gaming device or cell phone.

It also includes a cut out for a power cord to come up through the bottom.

It was an easy print with no supports or raft it did take about 17hrs to print at 15% infill and 2 shells. I used PLA and it came out great first try.

If you make this item I'd love to see what colors you use and what you use it for.

Thanks for checking it out!
