updated 15. 1. 2024 | published 15. 1. 2024

Summary

Added a cut-out to the top to fit the Alveo3D wall-mounted filter box.

Tags: [filter](#) [alveo3d](#) [enxlosure](#)

I rely on Alveo3Ds filter boxes for all my printers to safeguard against hazardous fumes and UFP. I highly recommend using an enclosure and a filter box, especially if your printers are situated at home, like mine, in a room or a similar space. You can explore purchasing one [here](#).

The same precaution applies to the EnXLosure I recently made. I incorporated a cut-out at the top to fit the filter box, specifically the wall-mounted variant. As cleverly pointed out by @Yazzman56_109764, you can easily turn the fan the other way to alter the airflow direction, positioning the largest part of the filter box externally. This not only conserves interior space but also prevents the cables from coming into contact with the filter.

Drop a like if you found this helpful. If you are from Sweden you can check out my webshop at [manicken.se](#). Have a fantastic day ♥

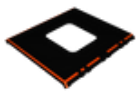

This remix is based on

EnXLosure; minimalist and printable Prusa XL enclosure with doors (single- or multi-tool)!
