---

Here is a quick bracket I put together for mounting the Yaesu FT-60's charging dock (and thus the radio itself) on the wall.

There are two STL files. One with text and another without. The original Fusion 360 file is also included.

You need two M4 x 10-ish screws to go through the bracket and into the bottom of the dock to keep everything together. The screw threads are built into the dock from the factory, so the dock itself doesn't need to be modified.

# Model files
