### Summary

I printed these to replace broken knobs in my Mazda BT-50 utility (2010 model).

[Hobby & Makers](#) > [Automotive](#)

Tags: [knob](#)

I printed with 20% infill and 'supports on build plate only'. Make sure the supports are on the side of the knob that you won't see. Keep in mind that summer temperatures in your car can exceed 100C. I've printed in PETG for now and have yet to see how they perform under elevated temperatures.

The original knobs have translucent material to allow back-lighting at night but I haven't included that feature in my design.
