Summary

Let's you hold your Eagle Torch (lighter) on a Printed Solid Next Gen Enclosure so it's right there ready to use.

[3D Printers](#) > [Accessories](#)

Tags: [lighter](#) [enclosure](#) [toolholder](#) [printedsolid](#) [nextgen](#)
[nextgenenclosure](#) [enclosuremodification](#) [printedsolidenclosure](#)
[eagletorch](#)

Continuing to extend my remix, "[Printed Solid Next Gen Enclosure Tool Hooks](#)", of [COWWOLFE's](#) tool hooks to now hold an Eagle Torch lighter.

I like to keep this torch near my printer to remove the small amount of stringing I may get when printing.

This was designed to work with my [Printed Solid NEXT GEN SAFETY ENCLOSURE FOR PRUSA MINI](#) but will work with any Printed Solid NEXT GEN enclosure.

Remix Details:

I took my remix of the Kores glue stick and modified it to hold an Eagle Torch lighter.

Additional Parts:

Optional: Eagle Torch Lighter

Print instructions:

- I printed mine with Protopasta **Back-to-basics Natural PLA**
- Please pick your preferred orientation for printing. I did my upright (opposite of the 3MF file), but it could also be printed on its side to make the hook stronger.
 - Supports are needed (I have had great success with organic supports)
 - See images for recommended print orientations.
- I used 3 perimeters when printing.

Change Log:

1. Posted initial Remix files - aka Version 1 for the Eagle Torch Holder.

Additional Notes:

- Constructive feedback is welcome. How can do improve the remix (tolerances too tight?)
 - fix orientation.
 - Add gcode with supports.
 - Anything else to add to a future change list?
- Looking for additional models for a Printed Solid Enclosure?
 - Checkout my collection: <https://www.printables.com/social/217988-cshorey/collections/401539>
 - drop me a comment if I should add something new to the collection.
