### Summary

Small mount for brushless ESC on Losi XXX-CR

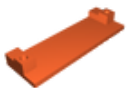

[Hobby & Makers](#) > [RC & Robotics](#)

This mounts using the existing unused holes on each side of the battery bay. The holes in the chassis need to be tapped using a #4-40 hand tap and the bracket attached with suitable #4-40 screws. M3 tap and fasteners would probably work too. Once attached to the chassis, the ESC is mounted with double sided tape. There is very little room under the XXX-CR body and this manages to just fit everything in there.
