Howdy! This model is a case for the epaper display lilygo came out with, their T5-4.7. It's a very cheap screen for what it can do. It has an esp32, battery support, touchscreen support, and much more. I am using it to display what I am listening to on Spotify so I needed a case and a stand so I made this. The three buttons are not accessible in this model but the usb-c port is so you can still charge/power/program it while it is in the case. Print with SNUG supports for easiest cleanup. I tried organic and it was a pain in the butt.
