I love my SHP9500s and I love my third party ear pads but I wasn't very happy with other 3D printed options people already made for fitting new pads in place of the OEMs.

This print is as basic as I could make this and capture all the features I wanted for this adapter.

Fits in same clip pattern as OEM, snug fit, positive centering using the existing centering clips.

One thing I couldn't address was the print orientation, it needs support for the outer flange unfortunately. Definitely print that direction to get a sharp edge for existing clips to bite on nicely.

STEP file for fidelity, swap to whatever your preference, or edit as you need in CAD s/w.
