Simple under desk mount for XBOX S as seen in video above.

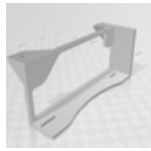

One STL file that you need to mirror to get the other side of the mount.

Features hexagon design - print upright to prevent large bridges - and features retaining lip so XBOX does not fall out. You can still lift the XBOX above the lip and slide it out to remove for whatever reason.

I printed in PETG to hopefully avoid any warping from XBOX heat over time.

Need #6 screws to mount under the desk.
