Tags: [mine](#) [military](#) [explosive](#) [militarymodel](#) [landmine](#)

Material: PLA-Prusament

Infill: 15 %

Supports: Yes

The model is made up of three parts, but only two are needed. The head and body are the main parts. The cover is optional.

Mine has no moving parts (springs). Only the head and body have threads.

I made the model according to real photos. The lettering on the top of the head is real, but unfortunately beyond the capabilities of my 3D printer. As a result of the inferior processing of this inscription, I decided to modify it (shorten it, but enlarge the font). I think by now the 3D printing should be fine.

There's a groove on the head where the rubber gasket should fit. If you don't put it in, nothing happens. It's only optional for a realistic look.

As I wrote above, you don't need to print all three parts - just the head and body.

The model is 1:1.

I have attached the STL and 3MF files. If you have any questions, please email me.

Unfortunately someone (I know who) is taking my models without mentioning my name and then selling them for money on other 3D databases. I have a license for all my models. For this reason I am considering legal action if the author concerned does not delete the models. Until then, unfortunately, I will not be adding any more models that I have already prepared.

Please, the models on this profile are my own and I will be happy to share them with you, but please download them for your own use. Follow the license.
