Summary

A sled handle and backrest I made because my son had trouble staying upright when he was small (2-3 years old)

Some sledge accesories I made for my son when he was young (2 years old) so he had something better to hold on to and a back rest to sit up right.

He still loves and uses it today after 2 years.

There are no external tools required, the bolts are inset and turning the nuts hand tight keeps everything well balanced.

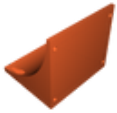

Because it comes with an underpiece you can also adjust the positions on the sledge very easily when they grow or if you have more than 1 kid.

I used supports for the handle but I believe you could also print everything without any supports if you do a little cleanup on the handlebar.
