## Summary

Upon request, I adapted the original model for 250g spools

[ordnung](#)

A storage option for filament rolls. As connection I used 15,5x1,5mm aluminum tube which can be bought in the Globus hardware store. With a length of one meter and an infill of 35%, the hold is still very stable. At lengths over a meter you should perhaps still set an angle in the middle. For attachment to the wall I have provided holes for 4.5mm countersunk screws.
