### Summary

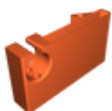

A drill holder and drawer, to be attached to a wall Holds drill away from the wall so that your hand can get behind it.

Holes were arbitrarily placed as this was designed to screw straight into a wall, they are 4mm and countersunk; I used drywall screws.  
It could be more of a snug fit for my Black and Decker, but I have left it like this as it may fit other drills too  
Edited the model since the picture so there is no support needed on the handle.
