Tags: [incenseholder](#)

Aromas and scents are used to trigger a range of responses. We use them to promote relaxation and meditation, aid sleep, promote concentration and healing, and stimulate creativity. In addition, scents and aromas are used for religious, aesthetic and practical reasons with specific scents and ingredients for specific purposes.

This design and 3D print is a way to merge the creativity available with 3D printing and the scents from incense sticks that spark creativity.

A design peaks with the incense stick held through the largest peak. The body is designed to catch the burnt stick.

The model is printed on its side.

Print Settings

- Rafts: No
- Supports: No
- Resolution: 0.32 (You can choose your own)

- Infill: 5 %
- Filament brand: Any
- Filament color: Any
