

Adhesion Raft

Once in a Six Side

Summary

My favorite way to verify if a build plate is level or not (as well as check burn in layers). Great first print!

Super quick and simple print I recommend doing after you first setup a new resin printer.

Simply duplicate the raft out to line the build plate like you see in the image, and print it off.

I recommend keeping the slice file on your USB so you can quickly check if your bed has gone out of level later on.
