Summary

Heard about this mod and decided to try it out. Didn't like existing designs so I made my own. See results in the video.

Here's a simple mod you can do to your PC to make it faster. It's not original, but I finally got around to making one for myself. I didn't like any of the existing designs I could find, so this is also a design created by me. Who knew you could make your PC faster just by adding a mini spoiler? The file has also been uploaded so you can make it and make your own PC faster too!
