Summary

Variation of all of Mikolas' smooth and gripped picks with a slight bevel or fillet for better sound and playability.

[Hobby & Makers](#) > [Music](#)

Tags: [guitar](#) [pick](#) [guitarpick](#)

Same picks as Mikolas' but with a slight bevel or fillet all around the pick. This gives a more “on point” and deep sound and is more comfortable in my opinion.

There's also a travel pick card for these picks here:

<https://www.prusaprinters.org/prints/72462-emergency-travel-guitar-pick-card>

“A set of 4 pick shapes - Standard 351 guitar pick, Jazz pick and, Triforce pick and the Sharkfin pick.”

I'd suggest a resolution of 0.1mm for the remixed picks. If you don't know where to start go with the rounded jazz pick.

I print the jazz picks at 0.1mm and with a thickness of 0.9mm.

Print flat on the print bed.

If you have any feedback it would be greatly appreciated.
