Created a new case to house both the stubby and the standard LTT Screwdriver together with up to 36 extra bits. I might make a bit holder magnet version like my other case down the line but it would end up way too bulky for me to put in the laptop bag and i seem to use my slimmer case a lot more often so wanted to do this first. I have also added a version to take full size 25mm bits.

### You will require

8 m3x20mm machine screws
