This is a digital **3D printable kit card** of **the Red Dwarf!**

Kit cards are fun, all-inclusive 3D prints that are printed flat and then assembled. This compact, 3D printable design combines the concept of a postcard with the joy of 3D printing.

The download contains a model ready to be 3D printed **flat** on a 200 mm print bed (STL).

You can **scale** the model as you wish but we can't guarantee that at a much smaller size, the model will print well.

3D PRINTING SETTINGS

We use these settings for most of our prints:

Layer height 0.2 mm

Infill 15 %

No supports

ASSEMBLY:

- Use small cutting pliers to free the pieces from the kit card. The assemble!

Do you like the model and don't have a 3D printer? There are lots of people who offer 3D printing services these days. Try searching for someone who offers them in your area.

This fan-made model was brought to life by Zdeněk from 3Demon. We are a group of modeling and 3d printing enthusiasts based in Prague, Czech Republic. We've been making 3D printable models for more than a decade. We make a lot of cosplay accessories but we also make all sorts of interesting 3D models.
