Summary

A snug clip for easy access to an ID badge or card with a hole at one end. Fits car visors, door pockets, etc.

[Hobby & Makers](#) > [Automotive](#)

This clip remix is a snug and secure way to keep your ID card handy in your car. It can be clipped to your visor or a door pocket (measure your visor/pocket and adjust the model as needed before printing). The center arm has a tab that snaps into the hole of the card, so you don't have to worry about the card getting loose in your car.

In my example photos, the card is an RFID badge for a parking garage. Your badge dimensions may vary, so do some measuring and verify fit before printing.

Keep in mind that cars can get very hot inside when parked in the sun. Print using heat-resistant material that works best for your local climate. I used PET-G for mine.
