For upgraded Ender 3 direct drive printers.

A top loading filament guide solution with a swivel head. Simply add a 0.4mm PTFE tube inside the swivel head and cut it to your desired length. I used a bit of glue to keep the PTFE tube in place.

From your filament roll, guide your filament through the swivel head before going to the direct drive extruder.

Top mount by sliding the guide into the front side of the top aluminum frame till it fits on the center of the frame.

Two models to choose from: single or double filament for those with two filament holders.
