## Summary

A simple hook to help keep a showerhead hose out of the way in a shower.

Tags: [hook](#) [bathroom](#) [shower](#) [hose](#) [showerhead](#)

I designed this part to loosely fit over the top trim of my glass shower door and help keep the showerhead hose out of the way when using the wand attachment. This is especially nice for folks who shower together, freeing up a hand that would otherwise hold the hose up and helping prevent the other person from getting smacked by a rogue hose.

Printed mine in PLA, 3 perimeters, 25% gyroid infill with 0.2mm layer FAST input shaping.

I've included the STEP file in case you need to modify the dimensions to fit over your shower door.
