I recently replaced the cartridge on my turntable and took the opportunity to model a replacement cartridge cover for the new one before I have a chance to lose it. I've tested this to fit over **Audio-Technica's AT-VM95E** cartridge snugly, without contacting the stylus. It may fit on other Audio-Technical carts as well, but I haven't tested any others. I've included the STEP model in case you need to fine-tune the dimensions for a different cartridge.

I did not have to use a brim for my print, but it may help depending on your printer, build plate, and ambient temperature. I had a bit of stringing on the inside that I solved by quickly passing the part over a flame.
