## Summary

Substitute for savings done by the industry

[Household](#) > [Kitchen](#)

Tags: [deckel](#)

I made some Deckel /lid / cap / cover for yoghurt and or cream cheese cups. Sizes suitable for the metric world...

As the industry saved the extra lid which was additional to the aluminium cover on the product, sold this as less waste, but it is simple cost-saving. This is the point with dirty package plastic, which will be mostly feeded in the waste-to-energy loop.

However, printing ist straight forward, PET or any other dish washer save filament is recommended. Infill can be 100%, makes no difference at printing. It is designed to fit tight.
