Summary

Rain collector to fit in the rainwater pipe

[Household](#) > [Outdoor & Garden](#)

This is a rain collector, which is to be designed to sit in the collector pipe (Fallrohr) for diameter 100mm metal piping (metric world...). I did not want to cut the whole pipe in 2 pieces, you need only to cut an vertical H cut, bend the 2 flaps open, slide the collector in, strip the flaps to be short enough to leave the output pipe free. Screw the flaps to the collector and voila, done...
