Summary

Originally modeled after an original Helios-44M-4 lens hood from the USSR.

I wasn't satisfied with any other lens hood around so I decided to make one myself!

Based on a soviet lens hood design for the Helios lens series, I made this 42° Field of view lens hood, mainly for a Helios 44M-4 but it works on other 50mm lenses as well.

Model files

lenshood-o52mm.stl

☐ Try using a smaller layer height (I used 0.06mm) and 100% infill and at least 3-4 walls
